Since its inception, Autodesk has been the world's leading manufacturer of CAD applications. Autodesk is so dominant that in 2010 it had 69 percent of the CAD market. However, many analysts question whether Autodesk can maintain this market leadership. In 2016, Autodesk's market share slipped to 59.5 percent. Autodesk began life in San Rafael, California, in 1969, the brainchild of brothers Murray and Gordon Bouch. The Boochs had won a business competition at the University of Utah to develop CAD tools for an expensive prototype called the CAT-45 (Computer Aided Tool). They sold the rights to their creation to UC Berkeley's Foster School of Business, where they set up as a software consultancy. In the early 1970s, the firm started to develop tools for drawing and drafting on a DEC PDP-11 minicomputer. In the mid-1970s, the company's first commercial product, DraftSight, was released for the Apple II. After a visit to a drafting school, the Booch brothers decided to provide CAD tools for microcomputers. The first AutoCAD Torrent Download product was introduced in December 1982. Autodesk was incorporated in 1975 as an independent company, and is now the world's largest design software producer, with approximately 20,000 employees in more than 90 locations worldwide. It has a market value of \$4.6 billion. In March 2017, Autodesk acquired Marvelous Designer, a 2D CAD application, for \$380 million. Autodesk's dominant position is rooted in product superiority, a strong brand name, and aggressive pricing. The company has grown by acquiring other CAD companies and products over the last three decades. Today, it owns more than 50 leading CAD products, including many of the world's most widely used ones. For example, AutoCAD Torrent Download and the 3D modeling tool, AutoCAD LT, are by far the most popular CAD software applications in use. Many developers now compete with Autodesk for space on the platform of choice for CAD. For example, one of the biggest rivals to AutoCAD is SketchUp, which is the world's leading free and open source (FOSS) 3D modeling tool. In 2018, Autodesk acquired Catia, a product with roots going back to 1946. Catia began life as a freeware (free of charge) application

What's the worst that could happen if we get so distracted that we're no longer able to find anything that we want to make? Well, you might not be able to eat a hamburger or sandwich. You might not be able to drive in the snow or mud. You might not be able to take a bath. You might not be able to have your children kiss you goodbye when they leave for school in the morning. You might not be able to hug your family. You might not be able to kiss your wife or girlfriend. These might sound like exaggerations, but they're not. In his 1989 book, *Bowling Alone: The Collapse and Revival of American Community*, Samuel Huntington wrote: "The problem of evil is a fundamental one for any theistic religion. It threatens theism itself. The one real alternative to theism is atheistic humanism. Atheistic humanism is without a sense of moral responsibility. It makes no commitments to truth, goodness, and beauty. It is positive nihilism, and what is worse, it is a social movement without a social conscience. It would not be surprised by the anarchy it encounters." Huntington's point about this threat is that for many of us, our phones are the most important thing in the world, and for some of us, they're the only things we care about. We can take our phones everywhere we go. We can play games on them. We can even — if we have the hardware and software — record and upload everything we're doing. So, what if we're driven to a point where, if we got so distracted that we were not able to find something that we wanted to make? What if we got so obsessed with chasing a game that we don't even leave the house? What if we spent every single waking hour staring at an iPhone screen? What if we were so glued to social media that we never leave our house and never meet new people? What if we're left not with godlessness, but with god? And that's the real problem.
